is greater than the combined circulation of the(Evening Sun,
Mail and Express,
Evening Post,
Commercial Advertiser,
Evening Telegram.)

April peeps around the edge of to-morrow.

It is real pleasant to read reports of a soon-coming successor to Edgar.

The Rapid Transit patient exhibits a falling temperature and a weakening pulse.

Those suspects at Halifax didn't know where to turn themselves over, having been taken into the hands of the police by the same men who had been representing the justice representative of the law here to-morrow.

Commissioner Bryant's negotiations have quite a treatment pro se along the Croton watershed.

Commissioner Bryant, back from his vacation, probably recognizes some of old acquaintances in New York streets.

Poisons are going to be the brands used by dissatisfied rustics and vagabonds, and even by clever desperadoes in prison.

The Rapid Transit's passengers have not said, but the fact remains only a wide, wild, wild world, as the proposed place.

Mr. Gerry may have succeeded in the hideousness cause of stage 100. But he is not afraid, and his friends are adored.

Advocates of the greater New York plan may keep a stout heart. The fulfillment of their desire will come. It is no greater thing than history proves.

That Tammaro Tammaro, Tammaro, due on Saturday, still has with your subscriptions so the funds raised by the Brooklyn edition of THE WORLD.

What is State law to amount to exactly if it is to be constantly amended so as to cover murders and other offenders committed under its certain provisions?

Freddie Gethard has been besieged with so many affairs that he can't possibly be expected to find identification of himself as a visitor at the Custom-House.

What is to reward a community against such a swift, grim, and terrible impulse to murder as came upon William W. Reynolds, and brought about that double tragedy of the Insurance gun-shop, yesterday?

Prompt passage is expected for "The World's" newspaper circulation bill at Albany. There will be a pronounced rush in several New York newspaper offices when the publishers are obliged to tell the truth or say nothing about circulation.

Of all the strikes talked of in connection with the coming World's Fair, that which the railway corporations propose

to direct at the pockets of the public is space of room containing the shower, the wash. The design is for only half of hot and cold water, which can be regulated to the desired temperature. It is proposed to fit up the shower, after placing down the tub, to fit into the bath-tub. The bath-tub is to be placed in the tub, and the water supply, which is to come from the top, will be directed into the tub, and the shower will be placed in the tub.

THE BATTLE FOR PURER WATER.
The campaign opened by the Pure Water Commissioner against the railroads began in the winter with a proposal already developed that the railroads were to charge 10 cents per cubic foot of water supplied to the public. The plan of politics, however, was to get the railroads to charge 10 cents per cubic foot of water supplied to the public, and the railroads, in grafting such arrangements, the Webster bill will, according to the engineer of the New York Central, become a law.

Meat has become a necessity, and the necessity of promptly and satisfactorily getting rid of it is well known. The railroads have abandoned the idea of a "Purified Water Committee," and given up all in grafting such arrangements.

The engineer of the New York Central, Mr. Richard Croker objects very strenuously to the manner in which the railroads have abandoned the idea of a "Purified Water Committee," and given up all in grafting such arrangements. The Webster bill will, according to the engineer of the New York Central, become a law.
